Exp 3:-

Code:

```
# Queue Operations Using Python

from collections import deque

queue = deque()

while True:
    print("\n--- QUEUE OPERATIONS ---")
    print("1. Enqueue")
    print("2. Dequeue")
    print("3. Display")
    print("4. Exit")

    choice = input("Enter your choice: ")

    if choice == '1':
        element = input("Enter element: ")
        queue.append(element)
        print("Element inserted successfully")

    elif choice == '2':
        if not queue:
            print("Queue Underflow: Queue is empty")
        else:
            print("Deleted element:", queue.popleft())

    elif choice == '3':
```

```
        if not queue:
            print("Queue is empty")
        else:
            print("Queue:", list(queue))

    elif choice == '4':
        print("Program terminated")
        break

    else:
        print("Invalid choice")
```

output
